Guidance Notes

Readings between 0 - 15% - No cause for concern.

Readings between 15 – 20% - May require further investigation when compared with the average of all readings taken. Consideration should be given to rechecking the area in three months

Readings greater than 20% - Will identify areas needing remedial work. There may be early signs of water ingress or evidence of moisture. Again, consideration should be given to rechecking the area in three months.

When readings go above 30% - Structural damage may be occurring and Deterioration is inevitable

Service Information/Additional Work

Service Information/Additional Work	

Please Note - To the Owner

Wheel Nut Torque should be re-checked after 50 miles and also checked before the start of every journey - you should also check your tyre pressure too!

Remember to drain water systems at the end of your season to avoid frost damage to taps and pipes etc.
